Poeticus and Poetaz Narcissus

POETAZ NARCISSUS—Alsace

THE Poeticus Narcissus are probably the best known of the short trumpet or cup class. They have only one flower on a stem, but are very hardy and multiply rapidly in the ground. They also force well. The blossoms of the Poetaz class are somewhat similar to the Poeticus and borne in clusters of three to eight flowers on the stem.

Customers at a distance will find it convenient to order by mail. **Malmo pays the postage.**

ALSACE (Poetaz). Pure white with yellow eye; large; early. Each15c; Doz. \$1.50; 100 \$11.00

Plant Bulbs Now

Early planting produces longer stems and early blooms

Flowering Bulbs For Fall Planting

There are no flowers which will give more pleasure and satisfaction than the Winter and Spring Flowering Bulbs. Their culture is so simple and easily understood that anyone can have splendid success with them by exercising a little care and forethought. On the Pacific Coast most bulbs may be planted from October to February. Bulbs planted in October or November will give better results than if planted later. By planting early flowering bulbs, it is possible in our mild climate to have a continuation of flowers the year round.

Tulips

The climate on the Pacific Coast is ideal for the growing of Tulips. They may be left in the ground from year to year, otherwise the directions for culture are the same as for hyacinths, except that tulips cannot be grown in water.

EARLY SINGLE TULIPS

The following list is made up entirely of the best varieties, all of which are suitable for either forcing or bedding. We import only the highest grade first size bulbs which always give the best results. **Malmo pays the postage.**

Owing to the unfavorable weather in Holland last year, causing partial failure of the bulb crop which forced prices upward, we are unable to offer all the varieties of Holland bulbs at the extreme low prices that we have heretofore quoted. But we consider ourselves fortunate to have at our disposal the entire supply of one of the finest bulb farms on Puget Sound growing exclusively for us the choicest Daffodils and Narcissus.

These are one of the newer families of Tulips and the best for use in Rockery or Rock Gardens. They are very beautiful, and being low growing are especially fitted for this work. We have added this line of Tulips to our list knowing that every lover of Rock Gardens has felt their need. The following list, you will find, contains the best varieties.

KAUFMANNIANA. Height 4". Earliest Tulip, of striking

beauty. Water lily shaped flower, blooming close to ground. Outside pink, inside beautiful primrose yellow with golden center. Native of Turkestan. Each.....35c; Doz. \$3.50
SYLVESTRIS. Height 10". Beautiful clear yellow, one of the best of all Rockery Tulips. A native of England. Each15c; Doz. \$1.50

These come into bloom in early May after the single varieties have passed. They are hardy and robust, with long slender, but very stiff stems, being fine to plant with Darwins for color contrast.

Malmo pays the postage.

In answer to our many inquiries on how to plant and space bulbs, we suggest the following:

Tulips and hyacinths should be taken up about a month or two after flowering. On Puget Sound generally the latter part of July. Cut back the tops within 1 inch, leaving the roots on, spread them in a dry room for a week or two. Then sort them and set out in September or October. They may be left in the ground the year around, but in such case the bulbs will deteriorate and the blooms become smaller.

Daffodils, narcissus and lilies may be left in the ground for several years, but should be replanted every three to five years.

Giant Darwin Tulips

DARWIN TULIP—Farncomb Sanders

Darwins are the most popular Tulips for outside planting. They flower in May, are of giant size and have a majestic beauty distinctively their own that is invaluable for garden and landscape effects. They come in the most varied and brilliant colorings, and their immense flowers of perfect form and satiny, wax-like texture, long stems and lasting qualities, make them ideal for both bedding and cutting. **Malmo pays the postage.**

"PRICES LOWEST CONSISTENT WITH QUALITY"

Breeder Tulips

The Breeder Tulips have been favorites in Holland for centuries, but it is only within recent years that they have become known in America. Their majestic size and remarkable colors place them distinctively in a class by themselves. Many of the flowers are sweet scented, and all are splendid for cutting. They are also very effective in combination with the Darwins, flowering late in May.

BREEDER TULIP—*Louis XIV*

Parrot Tulips

The petals of these tulips have peculiarly feathered and fringed edges, giving them a very ragged appearance. This character, together with the showy striped and shaded coloring and long stems makes them unlike any other tulip and a striking and lasting effect in the garden.

- ADMIRAL OF CONSTANTINOPLE.** Large, red tipped with orange. Doz.....65c; 100 \$5.00
CRAMOISE BRILLIANT. Deep crimson. Doz. 65c; 100 \$5.00
LUTEA MAJOR. Pure yellow. Doz.....65c; 100 \$5.00
MARKGRAAF. Inside orange, outside scarlet and yellow. Doz.65c; 100 \$5.00
PERFECTA. Yellow, scarlet feathered. Doz.....65c; 100 \$5.00
MALMO'S PARROT TULIP MIXTURE. All colors. Doz.60c; 100 \$4.50

Rembrandt, Bybloem, Bizarre Tulips

These flower at the same time and are somewhat similar to the Breeder and Darwin Tulips, but do not grow so tall and are quaintly and very attractively striped and feathered in contrasting colors. They appear especially to advantage in clumps among shrubs or in a border.

- REMBRANDT TULIPS.** All colors mixed. Doz.....75c; 100 \$5.50
BIZARRE. Choice mixture of varieties. Doz.....75c; 100 \$5.50
BYBLOEM. All colors mixed. Doz.....75c; 100 \$5.50

- BRONZE QUEEN.** Soft bronze outside petals, with inside petals a golden hue; an exceptional color combination greatly admired at recent flower shows. Doz.....50c; 100 \$4.50
CARDINAL MANNING (New). Dull wine-red flushed with lilac bronze, changing to rosy violet. A very large flower. Doz.50c; 100 \$4.50
CORIDION. Clear yellow, overlaid with a broad stripe of lilac through center of petals. A tulip of rare form and beauty. Doz.\$1.50; 100 \$12.00

Chionodoxa

(Glory of the Snow)

A lovely early spring flower, largely used in borders and bulb beds, also massed in rock work.

LUCILIAE. Beautiful blue with pure white center. Doz. 35c; 100 \$2.50

Crocus

This is the earliest bulb to blossom in spring. Although most showy when massed in large beds, or when planted in lines of distinct colors, a very desirable effect is produced by setting Crocus here and there over the lawn.

Crocus will care for themselves, blooming very early amid the grass and dying down to the bulb in ample time to be entirely out of the way of the lawn mower. The Crocus should be planted in the

autumn, in any good garden soil, about three inches deep and about two inches apart, if in beds or borders.

ALBION. Fine purple variety. Good for planting in lawns. Doz. 50c; 100 \$3.50; 1000 \$30.00

Lily of the Valley

ONE of the most charming spring flowering plants, producing in profusion its delicate bell-shaped, delightfully fragrant white flowers. They thrive best in a rich sandy soil and a shady situation — are perfectly hardy and can be left undisturbed in the open ground, where they will increase from year to year, and are very attractive in beds or borders. For outdoor planting and winter forcing pips are ready December to March.

Bearing Size Fruit Trees

WE SPECIALIZE in the production of large, bearing-size fruit trees, to meet the ever increasing demand from the home orchardist who wishes to have fruit from one to three years earlier than by planting small trees.

This stock has been properly transplanted to insure a good root system and properly trained each year through pruning.

All of these trees are strong and vigorous, and can be strongly recommended. Prices are in accordance with size and development, which are the factors influencing early bearing, rather than age only.

FOR PRICES, SEE VARIETIES!

Mammoth Single Hyacinths

Single Hyacinths are more desirable than the double. They are better for forcing, more vigorous in growth and are more beautiful than those of the double sorts. Customers at a distance will find it convenient to order bulbs by mail. MALMO PAYS THE POSTAGE.

OUTDOOR CULTURE. The bulbs may be planted any time from October to February. They succeed in any good, well drained garden soil. Dig deep and mix in a little fertilizer. Set the bulbs so that the tops will be between two and three inches below the surface and six to ten inches apart, with a little sand under and above them if it is convenient, being careful that none of the fertilizer comes in direct contact with the bulbs. Early planting brings the best results.

POT CULTURE IN THE HOUSE. Plant from September to December in rich, sandy loam, inserting the bulb (base downward) so that the top is just above the surface. Do not pack the soil in the pots, as the bulbs will be much less liable to push out when the root growth commences if the soil is not packed. Water thoroughly and set the pots away in a cool, dark place for three weeks. This will allow the roots to grow and become firmly fixed in the soil. The plants can then be brought into the light and will at once commence the top growth. Keep near the light, and at a temperature of 50 to 70 degrees. Water frequently.

WATER CULTURE. Fill the glass with water until the base of the bulb rests on the water. Set away in the dark for three weeks. Fill up the glass with water as fast as it evaporates. If the water becomes impure it should be changed and the roots well cleaned before putting in again. A small piece of charcoal put in the glass will keep the water pure much longer. Give as much fresh air as possible without a direct draught, plenty of light and keep the glasses full of water. If moved out of the direct rays of the sun, flowers will last longer.

BEARING SIZE FRUIT TREES

We specialize in the production of large, bearing size fruit trees, to meet the ever increasing demand from the home orchardist who wishes to have fruit from one to three years earlier than by planting small trees.

This stock has been properly transplanted to insure a good root system and properly trained each year through pruning.

All of these trees are strong and vigorous, and can be strongly recommended. Prices are in accordance with size and development, which are the factors influencing early bearing, rather than age only.

For Prices, See Varieties.
